603 were told that kambo was an abbreviated form of kambosa, and meant the woman who makes trouble.

"He is my grandson, he calls me wife, and I call him
[502] husband. We joke together about everything."

Up and down the river we heard these expressions from the old men and women with whom we talked, and to them these were all-sufficient explanations of the relationship of grandparent and grandchild. This making free was a verbal give-and-take that did not stop at brusqueness or teasing. Indeed, those who indulged in this freedom might discuss with each other any phase of the sexual life. Nor did they need to resort to any evasion or circumlocution. There seemed, moreover, to be a sanction for emphasis on the obscene and the lascivious in these conversations—obscene and lascivious, that is, from the point of view of those who were themselves speaking!

603 The effect of the custom is interesting. It acts as a form
● 187 of release for the young, who are held down under the strain of paying respect to those who are older and of greater experience. It is a way of escape from the discipline imposed by the parents and those of their generation.

What did the Bush Negro make of it?

We talked about it with men and women of many villages, and invariably the answer was the same.

"So we live in the bush, white man, and so we do. Our ancestors did this before us. Long ago our great ancestors brought all this knowledge with them from *Neng'e Kond'e* —from the land of the Negroes."

Yet in the beliefs of these people, and in their life as they live it, there are to be found a few suggestive hints which seem to have some bearing on this custom of verbal license between grandparents and grandchildren.

603 The Bush Negro child is given many names at birth,
[551] and one name is usually that of a departed ancestor, a deceased grandparent. It may be, then, that this puts the child on a plane of spiritual equality with his grandparents and with those of their generation who are related to him. There is, also, the feeling about the propriety of the mar-

2:Kahn D-5 (1922-1930) 1931
SR8 Bush Negroes SR8

175 not sufficient to make them adopt the white man's culture.

Many of the rebels, indeed, had been born on the sugar plantations and raised in close contact with European civilization. These were probably inclined to modify in many details the West African habits of their parents. But the white man and his magic were the object of universal hatred among the blacks. They had no incentive to adopt European ways, when they were proud of their own. And when they escaped into the bush, they found a typical West African culture reconstructed in the Surinam bush by the escaped slaves who had preceded them. It was as though a section of West Africa had been picked up bodily and deposited almost intact in the South American jungle. To this day, therefore, we have many evidences of West African culture in the life of the Surinam Bush Negroes. Their entire social structure, with the exception of a few items borrowed from the
[177] Indians and certain European inventions like gunpowder which were forced upon them, is analogous to that of the Old World.

178 Conditions were not the same in every particular. In
● 182 West Africa there is iron ore, and the art of iron working was invented and carried to a high point of perfection by the African natives. There is little iron ore in Surinam, so that the art of working it is lost to the Bush Negroes. A limited quantity of iron weapons and implements was pillaged from the plantations, and all of it was probably converted immediately into arrow-points, hatchets, and bush-knives, to carry on the guerilla warfare against the despised Europeans.

2:Kahn D-5 (1922-1930) 1931
SR8 Bush Negroes SR8

Common household implements for everyday use had to be made out of different material. Wood was used wherever possible. So in place of iron the Bush Negroes developed an elaborate and beautiful art of carving domestic utensils. Pots are stirred with wooden paddles instead of with iron ladles. Enormous wooden trays are used for carrying food. Combs, stools, beaters, and a dozen other implements all bear evidence of this extraordinary technique of wood carving, and this too is a heritage from their African ancestry.

In tracing the relationship between any two cultures, such as the West African and the Bush Negro, we should always bear in mind the possibility that both developed independently and that similarities between them may be due to the influence of similar environments rather than to actual culture contact. Thus, for example, while the Djuka corial is hollowed out of solid logs in a fashion similar to the West African canoe, which at once suggests borrowing, it is also true that the rapid waters of the Surinam, Marowyne, and Saramacca Rivers make any other kind of board or bark canoe impracticable. The Bush Negroes' dugout canoes may be an independent adaptation to the environment rather than a heritage from Africa.

This difficulty is a common one in anthropological speculation; examples are to be found on all hands. Thus, it has been maintained that the Reindeer Men who lived in France during the Magdalenian Age are related to the present-day Eskimo, because their bone implements and crude drawings bear certain resemblances, although the two races are

2:Kahn D-5 (1922-1930) 1931
SR8 Bush Negroes SR8

177 separated by ten thousand years of time and two thousand
182 miles of space. It has, however, been pointed out that both peoples had to face environmental conditions that are roughly alike, and that a similar world may well have led to certain similar responses and adaptations. In Dutch Guiana, on the other hand, we do know of a direct historical connexion with Africa, so that the customs, habits, art work, social organization, and general material culture of the Bush Negroes must undoubtedly be related to the similar culture of West Africa. A great many articles in everyday use among the Djukas are of West African design. African words and African habits can readily be identified.

177 We also know that certain articles used by the Djukas are borrowings from the aboriginal Indians of the district.
[252] Thus the cassava squeezer, the *matapee*, and the whole technique of preparing cassava, the grater and sieve for the flour, are borrowed from the South American Indians. But by far the greater part of Djuka culture comes directly from the Dark Continent.

A Swedish anthropologist, Gerhard Lindblom, made a study of Bush Negro implements and wood carvings in
[322] European museums, and compared them with the implements and wood carvings from West Africa, pointing out a number of homologous forms.

[643 The Granman's throne, an intricately carved wooden stool
352] made by the Djukas, as Lindblom pointed out, is similar in construction to those owned by the headmen of the Gold Coast, Ashanti, Slave Coast, and the Niger tribes. The ornate

Agriculture among the Bush Negroes of the Marowijne /Maroni/

by D. C. Geijskes (1)

1. Government biologist with the Department of Internal Affairs, Paramaribo.

1. Introduction

When one goes to the small communities of the inhabitants of the bush who live in the interior districts of Surinam, one quickly sees, upon examination, the basis on which the maintenance of such communities rests. The struggle for existence among primitive peoples covers the food supply and the resistance that can be offered against illness and pests. These two factors ultimately determine the birth surplus, which as a result expresses the possibility for survival.

Among the Bush Negroes we see in the course of the years an increase in the population, an advance, therefore, in spite of the obstructions of nature. But this advance creates new problems. It was during the Medical-Scientific Expedition to the Southern Border of Surinam, held from February to July, 1952, that, in conjunction with the medical investigation in the gathering of data about the "housekeeping" of the Bush Negroes of the Marowijne /Maroni/ and the Tapanahoni, we were struck above all by the problem of the food supply and the food itself. There is little sense in paying attention only to medical care unless at the same time attempts are made to improve the food.

An important part of the food supply is produced by agriculture. This supplies the Bush Negroes with the most, but not the best food. Next to it a number of forest products serve to provide for the need for food fats, while hunting and fishing must provide the protein.

B /513/
R
146 The scarcity of lipide foods,and, among the Boni, the low consumption of fruit might cause one to fear vitamin deficiencies. B In fact, there are no signs of it.
R
575 Body hygiene is excellent; Blacks and Indians bathe several times a day and are very fastidious about their persons.
B
R In summary, there is no appreciable difference in the customary activities, agriculture, hunting, and fishing, of the two populations. There is one in economic activity. Among the Boni,
433 who have a greater need for imported objects, the adult men work
B
R for wages four to five months per year on the average. These
461 jobs are very laborious and performed under bad dietary conditions,
[465] whereas the Indians rest when they are not occupied with their customary tasks, sometimes spending entire days stretched out
B in the hammock.
R
177 The two populations have been in close contact for a long
B time. The Indian villages farthest downstream have immediate
R contact with the first crop plantings of the Boni. Without having
177 any tendency to merge (their characters and their customs are
648 too different), Boni and Oayana have maintained regular relations since the end of the eighteenth century, doing a little trade in imported articles exchanged for hammocks and dogs trained for hunting. They often visit each other, and nothing stops the spread of
B illness from the one group to the other.
R
105 In fact, the way of life of the two groups is the same, the
182 environmental conditions have the same influence, and the differ-
164 ences which are observed in the pathology can only be attributed to a different sensitivity with regard to the principal illnesses.

B
164 Pathology of the Boni. We shall briefly summarize here the ob-
[114] servations of Dr. A. Sausse in his work Populations primitives du Maroni.

The pathology of the Boni is characterized by:

-- a resistance to malaria, which means that if the children have bad attacks an immunity will develop with age; the size of the spleen diminishes regularly from child to adult. The adults have only episodical attacks which are not serious; in particular

/524 cont./

165 Factors influencing the demographic characteristics of the Boni. Life expectancy at birth for the Boni is not only 12 years higher than that of the Indians, but is also considerably higher than that of the African peoples from which they came.

This fact can be attributed to two causes:

164 1. The Boni live in a more salubrious environment than
182 the African forest and have better living conditions. It seems likely that the Guianese forest, apart from malaria, presents few causes of bad health and is relatively favorable to man; the absence of trypanosomiasis permits men /525/ to gather on the banks of the large rivers, generously exposed to the air and to the light. The small number of the Boni and their dispersion over a vast territory stands in the way of the transmission of diseases by drinking water. In fact the water is generally healthy. Dysentery and parasitosis are considerably rarer and less serious than in Africa;

14 2. The Boni are a selected population. This is a very im-
162 portant aspect of their demography.

The slaves were the object of a systematic selection; the purchasing commissions of the rich colony of Surinam allowed only individuals of good health and constitution to pass. A second selection took place at the time of the formation of the tribes of Refugee Blacks. More than from a massive rebellion the rebel groups increased in size by the addition of those who, from year to year, escaped at the peril of their lives. Without any doubt those who preferred combat to servitude were the most vigorous and bravest. Voluntary migrations have always been a factor of selection: one may suppose that a migration which took place in such circumstances was accompanied by a particularly rigorous selection which, in spite of the time which has passed (eight generations), continues to influence the physiological
[734] characteristics of the Refugee Blacks. Notably it can explain
[157] the vigorous constitution of the Boni (there are only two congenital invalids out of 810 persons) and their exceptional qualities of physical courage and initiative.

ER /532 cont./

16 16. (cont.)
182 frequently find Indian stone axes under 5 to
172 6 meters of alluvia.

B Here and now, the rivers populated by
16 the Refugee Blacks offer the most striking contrast to the rest of
● 182 the Amazon forest.

If no social or political factor hindered their development, the populations of African origin would doubtless finish by gradually replacing the other populations of Amazonia, with the exER ception of the Asiatics established on the coast.

161 The factors which we have brought to light in studying the
174 Oayana and Oyampi Indians of Guiana suffice to explain the gradual extinction of the Indians of the Amazonian forest since their first contacts with the Europeans and the Blacks; the violence of which they must have been the object from time to time, as well as wars between tribes, have played only a quite secondary role.

It is not difficult to imagine what the demographic characteriER tics of the Indians of the forest might have been before the arrival
[165] of the Europeans. It may be imagined that in the absence of the epidemic lung diseases, the average life span was somewhat greater: perhaps 50% of the individuals instead of 45 reached the age of maximum fertility, and the cumulative fertility was as high as 4.5 instead of 4, due to a rather better state of general health. Under these conditions, in spite of malaria, the populaE tion would maintain itself; it could even increase slightly.

161 This point of view is illustrated in striking fashion by the ob-
165 servations made among the Oyampi Indians of Oyapok, a group
[758] which has had practically no regular medical care. In this group
[163] from October 1947 to January 1948, 57 deaths as against 60 births are noted. Out of these 57 deaths, at least 11 have been caused by epidemics of influenza or of pneumonia (17). If the Oyampi

17. From 1947 to 1959 there were three or four of these epidemics among the Oyampi, striking one or two villages each time and causing the death of some adults. This is part of the ordinary

B
R
121 /533 cont./

Thus the behavior of a human group, its fate as a people, and its very existence appear to be determined to a large extent by hereditary biological characteristics. This notion was seen clearly enough at the beginning of this century, but it has never been the object of thorough studies, the conditions for an incontestable experiment not being found together. Repudiated in the name of theoretical principles by the train of thought which has animated sociology for the past several decades, it has ended up by being completely lost from sight. Present-day sociology no longer takes into consideration the biological facts peculiar to the groups which it studies; one currently speaks of cycles of civilization, of laws of social change, of acculturation, etc., as if social facts had their own life and their own evolution, independent of the supposedly identical and interchangeable people. It is as though one claimed to study the psychism of the human being without taking his body into account, denying the influence of sex, age, sickness. Some have even managed to maintain that man is in all respects the product of the society from which he comes.

B
R
161
14
● 182 In the case studied here the falsity of these theories is obvious. If the Indians disappear wherever the Blacks establish flourishing societies, it is because their biological characteristics are not suited to the conditions imposed by the geographic environment, whereas those of the Blacks are to the highest degree.

Seen from this angle, the fate of the Indians of the Amazonian
B forest becomes clear; their social behavior and in particular their
R collapse upon contact with European civilization find an explanation.
[177] /534/ The relations of the Indians with the Europeans of past
B centuries have been equally influenced by their biological charac-
R
147 teristics. Their inaptitude for prolonged effort came in part from their physical weakness. When the Blacks and the Indians of the Amazonian forest have been employed side by side for years as soldiers and porters, there can be no doubt on this point. The Black is a force of nature. The Indian of the great forest, often full of good will, is betrayed by his physical powers.

B
R /534 cont./

14 In the whole of the Amazonian forest these facts have been
16 observed since the seventeenth century and have led to the re-
182 placement of Indians by slave manpower imported from Africa.
114 The course taken in denying the biological realities and wishing to find at any cost a purely sociological explanation has inspired in recent years an ingenious explanation by several authors:

The success of African manpower was, according to them, due to the fact that the Blacks had a civilization closer to that of the Europeans, whereas the Amerindians were more hunters-fishermen than agriculturalists.

B
R
[105] For any observer of good faith, the Indians of Guiana and
R the Blacks of the forests of the Congo and Gabon are largely
[433] on the same technological and cultural level. The Indians are
[361] certainly cultivators just as experienced as the Negroes; is one to forget that it was they who taught the rest of the world the greater part of the important tropical crops: manioc, maize, cotton, tobacco, and so many others? Hunting and fishing for them is only a secondary means of support; it is their instability,
R their lack of attachment to the soil, which may create an
[136] illusion on this point. It can be explained to a certain extent
[361] by the small size of the kinship groups; an ecological factor which does not exist in Black Africa must also be taken into account, the manioc ant, which swarms in particular in the zones habitually cultivated, promoting a seminomadism (18).

B
[136] 18. This factor plays only a secondary role,
[361] since the Refugee Blacks despite the manioc ant, maintain villages of permanent residence, only changing their crop plantings, but it is certain that it promotes the dispersion of the groups and seminomadism.

R
14 These considerations do not pretend to give a complete ex-
16 planation of the social behavior of the Indians of the Amazonian
182 forest. The biological characteristics of the group are only one of the factors of this behavior, parallel to many others, notably

/5 cont./

133 This extreme fragmentation of the relief must be remembered
182 as one of the ecological factors influencing the human peopling most directly; it renders the transport of heavy loads impracticable, the establishing of roads practically impossible. Men are led to
[361] settle along the rivers, which constitute the only routes of penetration toward the interior of the country.

133 All the important rivers flow into an alluvial valley whose
132 width varies from some tens of meters to a kilometer, dry during the greater part /6/ of the year, but flooded under several meters
134 of water during the great rains of May-June. This annual inunda-
241 tion makes the alluvial lands unfit for agriculture; the inhabitants of Guiana cultivate only sloping lands and even very steep slopes readily; for good drainage of the soil is indispensable for the raising of manioc whose tubers, which remain in the ground for more than a year, are threatened with rotting.

311 The cultivable zone is in fact closely limited around each village. Practically, it is limited to a strip of 1,500 to 2,000 meters along the banks of each watercourse accessible to pirogues.
[482] Transport of manioc tubers, carried on by the women several
[462] times a month, becomes impracticable if the distance to be covered with loads is greater than two kilometers at the maximum (1).

[101] [131] [184]

1. The Djuka, very numerous on the Tapanahoni, cultivate as far as three or four kilometers from the river; but in general, the Refugee Blacks prefer to build farming habitations at a distance of several days' by boat from their village when this gives them the possibility of farming in the neighborhood of the banks.

/6 cont./

824 wood is too hard to be worked with ordinary instruments or, on the contrary, because it is too soft, too easily attacked by insects, or
311 has a tendency to rot. The zone exploitable by native procedures is limited (for the floodable zones /7/ do not allow fine woods) to the slope of the hills bordering the valley of the watercourses accessible to pirogues; beyond, the cartage of felled trunks becomes impracticable.

137 A very dense epiphytic vegetation connects the trees with
136 their upper parts; it is there that life blossoms out: flowers, birds, insects, and monkeys.

484 Progress through the forest is very arduous. The undergrowth,
489 shrubs, bushes, bound together by fine and elastic lianas, offers
[130] a constant obstacle, the machete /sabre/ must be wielded at each
[412] step. The nature of the terrain, a succession of bogs and hills
[133] with steep and slippery slopes, makes walking for heavily loaded men exhausting. On the trail one succeeds with difficulty in making more than 15 to 20 kilometers a day; in the uninhabited forest one can scarcely advance five to six kilometers a day by cutting the strict minimum as one does when hunting. The opening of a route permitting the passage of heavily laden men cannot progress more than three kilometers a day on the average.

137 The great forest offers few real dangers, but it is an environ-
182 ment profoundly hostile to man, which does not present spontaneously any food resource and allows establishment of villages and cultivated areas only at the price of great efforts.

136 One meets few animals in the interior of the forest, and the resources for hunting are very limited; on the other hand, there are few harmful animals; wild beasts are few and practically do not appear; snakes are much rarer than on the coast and represent
164 only a slight danger. The most real dangers of the forest come from the fall of branches and epiphytes, principally when it is cleared for cultivation; each year there are accidents of this kind in Boni country. Besides, work in the forest is the occasion for many wounds which tend to ulcerate.

/1 cont./

132 [513] The climate is relatively temperate and easy for the European to stand. In the forest the thermometer does not rise to more than 28° during the hot hours, to go back down to 20° at the end of the night: everyone sleeps with a blanket, Refugee Blacks and Creoles as well as Europeans. Humidity is very great during nearly all the year; precipitation averages three meters a year or about 50 centimeters less than at Cayenne. The year is divided into two seasons: "summer" from July to December, and the rainy season the rest of the year, with a maximum of precipitation in 133 May and June. The water level varies considerably in the course •182 of the year (several meters). The populations of the interior, [361] spaced out along the rivers, suit the rhythm of their lives to the [164] height of the water; the water rules transportation, fishing, and crops; moreover, a certain number of illnesses are in close relation to the rains, in particular those which have an insect for vector.

241 [134] Almost everywhere the soil is very poor in organic matter and fundamental ingredients, very waterlogged necessitating the practice of an itinerant agriculture on burned-over areas; the period of fallow ground varies from two to ten years, the optimum seem- [136] ing to be about six. The inhabitants of Guiana cannot allow ground to lie fallow regularly because of the ravages of the manioc ant, /8/ which is active especially in habitually cultivated zones. [134] Vain and costly efforts made by Europeans notably at Saint-Jean du Maroni about 1950, have shown that the fertility of lands not [242] burned over is practically nil. The Indians and the Refugee Blacks consider that the fertility of the soil depends exclusively on the weight of cinders laid down during the burning.

When burned-over areas are cultivated, only one harvest is obtained; but this harvest is abundant, and the soil thus utilized can be regarded as relatively fertile. The knocking down and burning do not require great labor, so that primitive agricultural methods 241 can be considered to give a good yield. As a matter of fact, the 179 diverse populations of Guiana, Creoles and Refugee Blacks, have entirely adopted the methods of work resulting from the millennial

/8 cont./

241 experience of the American Indians, which seem the only utilizable
177 ones in the interior of the country.

Thus these populations which are so varied have in large measure the same agriculture and the same food.

241 Basic crops are manioc, consumed in the form of couac
[262] (flour roasted and granulated) which is the base food, the Indian yam, and tubers analogous to taro (dachine, "Caribbean cabbage").
[171] The Refugee Blacks plant mountain rice in addition. The Creoles do not plant rice but have on the other hand a greater variety of vegetables and fruits.

311 Men in Guiana live on the rivers; villages and cultivated
36 lands are to be found on their banks; everywhere else one finds
182 only the deserted forest; only Creole gold miners, constrained by their work, sometimes establish their villages far from watercourses.
181 The Refugee Blacks, like the Indians, love the rivers where they
182 find, along with water and light, the possibility of moving with-
171 out hindrance; they are a people of canoeists; their traditions are widely influenced by life on the river, and their mode of living finds in this a deep originality.

13 In fact, setting aside the gold miners' villages, we can say
133 that the populations of the Guianas living by exploitation of the
182 natural resources of the country have a linear habitat: it can be
171 estimated not in surface but in length, for it is limited to a band of one kilometer along each watercourse accessible to pirogues. These watercourses are limited in number, for one can take for granted that at a distance of some 20 kilometers from the source of each river, the congestion caused by fallen trees and parasitic vegetation prevents easy movement.

[61] Actually, considering the very low density of the population,
[226] the small rivers are scarcely utilized except as fishing places.

487 All the rivers are interrupted by falls and rapids which render
501 the use of large boats impossible. The pirogues of the Refugee

/10 cont./

The Boni, about 1,000 in number, occupy the course of the Lawa between Abounasounga Falls to the north and the falls of the Litani to the south. Their "great villages," that is, their residential villages, are: Agodé (Boniville), Kotika, Asisi, Loka, Papaï'ston, Kormotibo, Lapé, and l'Enfant Perdu. Three small villages founded more recently are established on the lower course of the Maroni. The territorial implantation of the Boni has been disturbed by the settlement of Creole gold miners on their territory for three quarters of a century. Their demographic situation is mediocre and their tribal organization, compared to that of the other tribes, has lost much of its strength. However, they still make up a human grouping full of strength and originality.

The Djuka, whose "great villages" are in Surinam territory on the /11/ Tapanahoni, can be evaluated at 7,000 to 8,000 in total. At the height of demographic expansion, their farming villages swarm on both banks of the Maroni and on the islands, penetrating more and more deeply into the interior of French Guiana, where in places they form small temporary groupings living in symbiosis with the Creole gold miners; the Boni recognize their right to cross their territory but not that of establishing villages in it.

For a century the economy of the Refugee Blacks has been founded on a symbiosis with the Europeans and Creoles; they furnish specialized labor (construction, but above all, transport) in exchange for relatively high wages. This economy finds itself threatened by the gradual disappearance of gold mining; there is developing a tendency toward temporary emigration to the European work yards of Saint-Laurent analogous to that of the Saramaka of Surinam to French Guiana. This is a serious threat to the interior cohesion of the tribes.

F
164
162
744

/13 cont./
whom African blood predominates are seen; the mulattoes are in general traders, or practice small stock raising.

B
182

The Refugee Blacks are the only population of interior Guiana who can be regarded as perfectly adapted to the environment and capable of subsisting there by their own means. They

B
164

have a protection against malaria which operates thus: If the children suffer from this endemic disease, resistance appears with age, protecting adults from its attacks.

B
[161]

They are subject to serious skin diseases, notably to pian, but these maladies have few demographic consequences; only the Boni are seriously attacked by venereal diseases. The Djuka are in the process of very great demographic expansion.

B
182
433
511

The strong tribal organization of these populations and their solid implantation on the ground render effective their methods of working, farming, hunting, and fishing, which assure them not only excellent provisionment but considerable means of exchange and a material standard of living superior to that of most of the populations of Africa. The techniques of the Refugee Blacks, especially as regards the squaring of wood, sawing, and building, procure for them resources comparable to those which the populations of the Ivory Coast get from coffee and cacao. /blank page/

/17 cont./

162 —On the Lawa a group of a little less than 680 persons is
103 settled on the French bank (villages of Agodé (Boniville), Asisi,
361 Loka, Tabiki (l'Enfant Perdu), Lapé (La Paix), and Papaïston).

—In proximity to this grouping subsists under Dutch control the village of Kotika (Cottica), grouping about 150 persons.

—In the region of Abounasounga two small groupings live in symbiosis with the Djuka. Finally, in the lower course of the Maroni exist three villages: Apatu, Ma Imma, and Wétiti. The whole represents about 150 persons.

361 These villages are stable: Kotika, Lapé, Asisi, Kormotibo
182 were already in existence at the beginning of the 19th century
[175] and their names figure in the report of the Franco-Dutch border mission of 1861; by contrast, farming habitations are moved according to the necessities of agriculture and fishing; thanks to this organization, a relatively numerous grouping can, in the interior of Guiana, in spite of conditions imposed by the geographical environment, conserve complete stability and a firm attachment
[171] to the ground. It is useful to compare this organization with the basic instability of the Indians of Guiana, for it shows very well that this instability is ascribable to psychological and sociological factors and not at all to the geographic environment.

101 The Boni designate themselves by the term Aluku nënge. The meaning of this word is forgotten. It is possible that Aluku
[613] was the name of an ancient chief, or of the founding ancestress of a lineage. On this subject it is to be noted that the name of the most ancient ancestress known of the Dju lineage, who can be thought of as living at the end of the 18th century, was called
[175] Aluku. This name has been used since the origin of the tribe;
[103] indeed one reads in the interrogation of the woman prisoner conducted in 1847 by the French at Oyapok that her village was called Loukou (1).

/28 cont./

613 614 784 [621] although the supposed common ancestress doubtless goes back to the beginning of the 18th century and for three generations they have been divided among four villages situated at a week's distance by boat from one another. We can, with very few chances of error, affirm that they certainly have a common matrilineal origin and that they in fact constitute one lineage.

182 619 [361] [484] On this subject let us note that geographical separation cannot play the same role among the Refugee Blacks as in the African tribes of cultivators. The Refugee Blacks, whose habitat is linear along the banks of the river and who, being boatmen, are continually moving, cannot be completely isolated from one another.

613 614 511 /29/ Under these conditions, how can we explain the existence within certain lineages of individualized fractions subject to a separate kunu, such as Papaïston 2?

One can assume that these fractions do not really have the same origin as the principal group and that they result from a process of assimilation of a paternally related fragment.

We have cited the example of Aneta's descendants (Aw.B.3). They are already integrated into the social life of the group; in two or three generations nobody will remember any longer their exact origin. But they will remain differentiated from the principal fraction of the Awara Bakka because they will still be subject to the kunu of their ancestress. [784]

121 Such are the elements we have been able to draw from a general study of kin groups among the Boni. We shall look for other data in the study of the implantation of these groups on the soil, and especially of the apportionment of lands among them; finally, we shall study family custom and especially inheritance.

A complete understanding of the kinship system and its functioning can be obtained only in the future by following the evolution of kin groups, the formation of new villages; and the designation of new headmen.

614 /31 cont./
769 Another very important principle in the minds of the Refugee
796 Blacks is that prayers must be collective; the principal ceremonies,
613 such as the New Year's prayer, must bring together, at least in principle, the total lineage.

These notions certainly have influenced the custom of the
● 182 Refugee Blacks with respect to residence and marriage. The lineage
613 cannot allow the permanent departure of a woman from her native
614 country any more than that of a man. In the populations of Black
591 Africa with matrilineal filiation, this conception is reconciled
[171] with the necessities of practical living in the following manner: the wife leaves her relatives to settle down with her husband, but when her children reach adulthood they must return there. Thus one cannot attribute to this preoccupation alone the special system of marriage among the Refugee Blacks, which does not involve the permanent cohabitation of man and wife. We shall see that this system was inspired by social and psychological necessities. But concern for the unity of the lineage, to which it corresponds perfectly, has surely contributed to make of it a rigorous principle of customary law.

601 Kinship within the matrilineage. The kinship terms translate a
613 purely classificatory system. It depends only on the number of generations separating from the foundress. The sons of women
611 descended from the foundress in uterine line are regarded as members of the matrilineage and united in the system of appellation. The children of these men are no longer part of the matrilineage.

/33 cont./

602 Patrilineal relationships have other important incidences which we shall bring to light in speaking of Boni beliefs. From the point of view of social structure, let us note:

[182] — That patrilineal relationship has no influence upon residence or organization of material living;

[582] — That the law of exogamy which it involves has only slight influence on the freedom of choice of couples; because of the relatively large number of patrilineages.

[601] As far as the ties of patrilineal kinship are known (in general people do not go beyond their grandfather), the same kinship terms are used as in the matrilineage, with the same classificatory value.

601 613 Appellations. We have seen that within the matrilineage the kinship appellations depend only on the number of generations with respect to the foundress.

Speaking familiarly, they use for addressing:

— People of the same generation, the expression — ba So-and-so... (man) / sa So-and-so (woman)

— — of one generation above, the expression — tiyu, uncle / tiya, aunt

— — of two generations above, the expression — papa / mama.

[192] /34/ Papa does not mean father, but ancient, honorable. Likewise, mama means aged and respectable woman.

For example, to say good day they will say, according to the case, ba So-and-so, ɔdio, or tiyu, ɔdio.

[551] In speaking to people one generation below, they say mati (comrade) or call them by their name without any other appellation, which would be considered very insolent in addressing their "brothers" or "uncles."

/82/

Territorial Implantation of Lineages

423
613
311 As we have shown, the Refugee Blacks are caught between contradictory imperatives:

--Their legal thought, centered on joint possession by the lineage, pushes them to distribute land among the lineages in compact blocs;

[182]
[241] --The geographic environment, and most especially the ravages of the manioc ant, obliges them to give to each individual the possibility of abruptly changing his territorial sector or to hasten the planned rhythm of his fallow fields.

The solution which has imposed itself has been to divide the lands of each lineage into a certain number of zones scattered on the two banks of the river. Instead of finding large blocks with a single holder, we are going to find sectors sometimes rather small. With that exception, the legal principles of the Refugee Blacks keep all their practical value.

621
504
613
423
[489] Each village possesses a certain number of landing places or dégrads /wharfs/, from which fan out a certain number of paths. The wharf is the center of a territorial zone within which the members of the lineage fan out, pushing their clearings farther and farther, until they meet the clearings created by other lineages. At this moment a boundary is in effect created, at least in some points (1).

[184]

1. Among the Djuka it happens that a wharf may be common to two lineages and that the boundary may be marked by a big road perpendicular to the river and starting from the wharf; this system corresponds to a concern for establishing more precise boundaries between groups occupying land to the maximum. It is not observed anywhere in Boni country.

/98 cont./
423 613 621 571 emigrating fraction possesses exclusive rights over the /agricultural/ land /terroir/ it forms. But it does not lose, at least in principle, its rights over its original land /terroir/."

The study of finages gives us still more important information concerning the exercising of rights of use:

241 423 613 621 /97/ Of 100 clearings examined, 81 follow the normal process according to which the woman has her clearing made on the land of her lineage (1). Of these 81 clearings, 14 had been made under conditions not made clear, 48 had been cut by the husband, 14 by a near relative (son, brother, exceptionally brother or son-in-law), five by the woman herself.

1. For the joint sector of Boniville, the inhabitants of the village were considered as users of rights without distinction of lineage.

In only five cases it is, on the contrary, the man who brings his wife onto his lineage's land.

A little more frequent is the case of a man cutting a clearing for himself on his lineage's land.

Finally, the case in which, for reasons of convenience, a member of a lineage asks to work temporarily on the land of another lineage is met twice. Thus this is an extremely unusual practice.

182 171 [177] Influence of the geographical environment on the social structure. These observations are to be compared with the ones that can be made about the Oayana Indians and the Indians of Guiana in general, living near the Refugee Blacks, in the same geographical environment and almost in the same way (let us recall that the Refugee Blacks borrowed the whole of their material culture from the Indians).

/97 cont./

R 105 [361] The Oayana Indians are half nomadic, moving their villages every ten years on the average. They have neither a permanent center of peopling, a place of worship, nor a cemetery; they do not have ancestor worship, at least no concept involving a precise and permanent tie between the living, the dead, and the land.

R 114 182 [136] This state of things has been attributed by several authors to the geographical environment and especially to the ravages of the manioc ant; the manioc ant, swarming particularly in formerly cultivated zones, makes nomadism advantageous. From this would have resulted a social structure and a mode of living adapted to these special conditions.

B 114 769 182 The example of the Refugee Blacks shows conspicuously that these considerations, in spite of their undeniable interest, do not constitute an explanation of general scope; for the Refugee Blacks, the only social ties conceivable flow from ancestor worship; above all the imperatives of material life the individual feels as a primordial duty the act of attaching himself to the village of his ancestors, to the land they cleared off and which remains under their protection.

B 182 241 423 613 The difficulties inherent in the geographical environment have been easily surmounted or gotten around. Rather than vast zones with one single holder, each lineage divided its finage into sectors distant from one another. If these zones become temporarily unusable, the Boni go to create farming habitations on the upper course of the river, without ceasing because of this to reside habitually in the village of their ancestors; there results from this no other constraint but losing two weeks each year in going and coming on the river.

/99/

182 161 241 423 613 That this system is perfectly workable has been sufficiently demonstrated by the regular expansion for two centuries of the tribes of Refugee Blacks and by the good functioning of their institutions.

182 Thus the basic instability of the Indians of Guiana cannot be attributed to the influence of the geographical environment alone. It comes essentially from social and psychological factors.

/100/ STUDY OF FARMING HABITATIONS

128 We are now going to study the functioning of the farming habitations under the same aspects:

--Structure (composition of each one, kinship ties);

--Territorial implantation: nature and extent of rights over the land;

--Functioning.

241 621 184 Not all Boni have a farming habitation; about two-thirds of them are satisfied with the lands they occupy near the residence villages.

241 621 361 162 613 The farming habitations we are going to study more especially and which are situated between the mouth of the Inini and Simayé Falls to the south, group about a hundred persons belonging to the Dju, Lapé, Awara Bakka, and Papaïton lineages. Another group of farming habitations situated a little south of Kormotibo, which we shall study briefly and only so far as their composition is concerned, bring together about 60 persons. Finally, other very dispersed farming habitations exist, belonging principally to the Kotika lineage, some in the Maripasoula region, others in the Abattis-Kotika Falls /region/.

241 184 621 [361] [162] On the whole, the Boni farming habitations cannot be compared either as to importance or stability with the Djuka farming villages which are placed at intervals on the middle course of the Maroni, grouping 3,000 to 3,500 persons: this is easy to understand: the Djuka, continually short of land, are obliged,

/100 cont./

24 62 [184] under pain of losing their rights, to occupy the soil to the maximum. Besides, settled very far from their residence villages, they are led to creating more lasting establishments.

Among the Boni, farming habitations do not amount to much, built carelessly (to designate them one says kãpu (camp), and the groups who work there are not very stable.

423 241 [182] [184] However, the principles of establishment and functioning of farming habitations are exactly the same for the two tribes and result on the whole from the customary laws which, among the Refugèe Blacks, govern the possession of land:

[425] [613] 1) When a man cuts a clearing in a zone which has never had any human establishment, he creates at the same time as a right of use for himself an imprescriptible real right for his lineage (bɛɛ) or more precisely for the fraction of the lineage living in the same village and subject to the same authority;

[428] [613] 2) This right is joint; at the death of an individual, anyone of that fraction of his lineage may occupy the lands he used to cultivate habitually. If there is a dispute, it must be settled within the framework of the lineage; /101/ /Fig. 17 appears here/ /102/

3) The extent of the zone over which this right is exercised is limited only by the zones over which other rights are exercised.

We have seen what mode of occupation of the soil resulted from these laws in the neighborhood of the "great villages." Here the distribution of lands among the farming habitations follows practically the same laws, whose effects are less rigorous, considering the very low density of occupation of the soil.

425 [361] 1) It is taken for granted that an isolated establishment in a quasi-deserted zone does not create lasting rights. If it happens to disappear, anybody may come to settle there after ascertaining from the first occupant that he no longer needs the place (such is the case with the very scattered establishments south of Simayé Falls up to Indian country; they do not create real territorial rights for the benefit of any lineage whatever.

/102 cont./

425 2) On the contrary, from the time that occupation of a region becomes habitual, even by groups of small numerical importance, people pay attention to the attribution of the lands. [361] [613] Thus it is assumed that the west bank of the Lawa south of the Atikati habitation up to Simayé Falls has belonged, since the end of the last century, to the Lapé lo, which was occupying it in 1957 by the Paako, Samo, Pwen, Saléni, and Makélé habitations.

423 613 241 361 3) Within each zone the rights remain joint and anyone of the same lo may come to settle there. Thus the farming habitations move around, but within a definite sector. Thus for example Kwaku (Lapé) abandoned in 1954 his habitation situated in the lands of the Lapé lineage (it was too damp in the rainy season, he prefers to content himself with the lands of the "great village"). He does not lose his rights because of this. If he decides eventually to come back, he will settle anywhere in the zone attributed to the Lapé lo.

182 161 241 361 425 It goes without saying that if the population were more dense, such a principle would be difficult to apply and that serious disputes would arise. But this mode of occupation of the soil is perfectly suitable, in their present situation, for the tribes of the Refugee Blacks, for it allows them to practice, with a minimum of friction, the seminomadism which the geographical environment and especially the manioc ant impose.

241 361 423 The zones occupied by the farming habitations rarely have a single holder: most often they are divided into separate sectors on different parts of the river.

504 613 361 423 Actually, as we have seen around the "great villages," each lineage possesses a certain number of "dégrads," or landing places, from which paths radiate. Each "dégrad" is rigorously reserved for the members of a lineage. The occupants of a farming village radiate from around their landing place until they

178
[173] /192 cont./ thus it is that they have kept a rather exact description of the elephant (leu) and the gorilla (malẽ%gwana).

[648] imposed on the slaves has prevailed. There is nothing surprising about that, since the slaveholders tried, in order to prevent revolts, to mix to the maximum the Blacks of the various tribes.

174 A certain number of men initiated in differing degrees
177 into African cults were among the rebels. They tried to conserve and transmit these rites, which their descendants have more or less transposed or deformed (2). As far as one can

• [182] 2. The single fact that the vegetation and fauna differed totally from those of Africa immediately required a modification of ritual which called for infusions of leaves of numerous plants to which definite magical properties are attributed.

[198] As far as one can judge by the secret languages attached to these cults, in which are recognized many words deformed from the ordinary language, and a few Indian words, these cults in their present state must

[178] differ appreciably from the ones which gave them birth. In fact, the only thing the Refugee Blacks have authentically kept is concepts, metaphysical and moral ideas.

/226 cont./

784 182 Finally, a fifth kunu is threatening to show itself. This is a remarkable affair which clarifies at the same time the legal and religious conceptions of the Refugee Blacks.

672 About 1918, a stupid accident which happened at Dagouédé (gun which went off by itself at the moment when it was being stowed in a boat) caused the death of a girl, Santonia, daughter of Kuluba (Aw.B.1). The unwitting perpetrator of the accident was Kwau (Dip. I, Apatu village). (692) There were people in the Awara Bakka lineage who accused him of having done it on purpose, but the grand man judged that he was innocent and the affair was shelved.

784 614 775 787 Now in April, 1957, Kiboya (Dip. II), a young woman of 25, was attacked by a fit of possession. It was Santonia's yɔnka which was supposed to reveal itself in her. It declared that it was going to exercise a kunu on Dipélu. It was not claiming that Kwau had killed her on purpose and even asked the Awara Bakka not to make reprisals.

628 614 Nevertheless, full of fury, a party of Awara Bakka went the next day to attack the village of L'Enfant Perdu, demolishing a certain number of huts and pursuing the inhabitants, some of whom took refuge in the water and others in the bush. There were, however, no serious blows.

The next day they went to attack Kormotibo in the same way. It is to be noted that only after that did they think of blaming Kwau, who was then living at Wacapou. But the grand man had intervened in the meantime to re-establish peace.

In both cases the façades of several shacks were smashed and two men, Bonana and Amatodja, who had run less fast than the others, were struck symbolically.

/229 cont./

784 The kunu and Boni family life. It follows from the detailed
613 examination we have just made of the situation of the various
[428] lineages that the transmission of the kunu within the uterine kin group is a rigorous law which suffers no exception whatever.
[571] The process of assimilation which permits in a certain measure,
[602] on the social plane, the integration of fragments of paternal kin (like Awara Bakka 3) into a group does not come into play here. Unity with respect to the kunu can therefore be regarded
[611] as a rigorous criterion of a common matrilineal origin. The
[829] Boni feel it as an obvious fact and in such a case it is the proof that comes to their minds: "We are of the same origin since we have the same kunu."

784 Thus the kunu appears as the principal cement of the
613 unity of the groups. It opposes the dissociation of the lineages;
571 this curse which weighs collectively upon a group and which
182 can be exorcised only collectively is an iron bond which nothing can break. It obliges the Refugee Blacks to surmount their individualistic tendencies, their egoism which, if they acted freely, would soon have scattered them into a dust of
[888] separate persons. In the face of adversity each one accepts with good grace obedience to the elders, who alone know how
[672] to talk to the gods and appease them. Nobody ever is indignant or even surprised to be struck down for the offense of another; there is not a movement of revolt or hostility against the one who by his inattention or inconsiderateness has brought on misfortune. On this plane the members of a lineage feel like cells of a single body.

784 The collective legal responsibility of the members of a
613 group in the domain of customary law flows from the kunu.
672 We have observed that several times, notably at the time of the obsequies for Kotoïda (Afi lineage) in October, 1956. The president of the lãnti kuutu condemned the members of

643 /235 cont./

775 A few years ago a Kormotibo woman was thus confounded.
787 She had wanted to pretend possession by a yɔrka in order to
695 blackmail another family.

Grand Man Difu recently forbade the bequeathing of gods
784 and yɔrka exercising the kunu (1). People will wait for them
428
643
[787]

1. Let us recall that the dead are questioned on this subject as for the apportionment of the rest of their heritage.

to manifest themselves of their own accord. That will reduce the risks of pretense.

643 The grand man's lineage does not exercise any kunu upon
613 another lineage, and no kunu is exercised upon it. For the Boni
775 this is a fundamental idea, because the grand man is precisely
784 the supreme recourse in case of persistent calamities attributed to the yɔrka of a dead person. The grand man has the power to exorcise all the dead Boni. If his lineage exercised a kunu or were victim of one, he would be judge and litigant at the same time.

When, with the death of Grand Man Difu, the Dikan lineage is extinct, and when the function passes to another lineage, consideration of the kunu exercised by the lineages upon one another will be determinative in the choice of his successor.

787 Divination; Premonition; Dreams
626
● 182 Divination. It plays an essential role among the Refugee Blacks as in all animistic societies. Individuals have recourse to it to inspire all important discussions; in large measure one can say that for them it takes the place of will and conscience.

/235 cont./

787 626 182 571 But divination is more than that; the interpretation it gives of the events of daily life is the very mover of the animistic society; presenting calamities /236/ as the punishment of offenses against customary law, it is constantly vitalizing that law, conserving its practical value and its efficacity. What it expresses is not the hidden influence of chiefs or priests -- there are in fact neither chiefs nor priests among the Boni -- but the very consensus of the group, the deep feeling it has of its unity.

787 There are two large categories of divination:

The first consists of calling on a divinity through the medium of its bearer. For that, one applies to a person (of his [791] lineage if possible) who has a gadu. This is a service which is rarely refused. This person employs the appropriate procedure for calling his gita and enters into trances. The god speaks, the question is put to it; if it is well disposed, it may give the explanation or the advice requested. For example, one asks for advice before looking for another sector to make his clearings.

787 776 Suggestible as the Boni may be, they do not fail to perceive that all the gods interrogated do not give the same directions. So they think that certain ones are stronger than others; there are people whose gita is considered to be particularly [791] good, others whom they have stopped consulting entirely. The defunct head of Kotika village, Bayo, used to have a gita so remarkable that people would come from very far to consult it.

[829] [178] The general opinion is, furthermore, that nowadays everything is degenerating and that good gita are no longer seen as in the olden days.

787 [791] These consultations involve only a very modest remuneration, a bottle of tafia at most (1). If it is not a matter of a

1. The remuneration of the possessed person is in question; the god always demands a payment for itself, of variable size according to its whim.

/241 cont./

152 828 754 777 Jealousy. To speak of jealousy as a negative magic force is not to be false to the thought of the Refugee Blacks. They regard it as an attenuated force of wisi, capable of bringing misfortunes even if no sorcery has been formulated. Jealousy is very marked in their character, associated with an individualism verging on asocial tendencies. When somebody is accused of wisi, jealousy is the commonest explanation of the crimes attributed to him; it is thought for example that a man can be jealous of his brother's growing rich to the point of making him die; that a woman may be jealous of the beauty or health of her sister's children. Not laying themselves open to jealousy is the constant preoccupation of the Refugee Blacks; one observes it in daily behavior, for example in the greetings which they exchange on the river. They never say, "I am well," but: "I feel only fair." If they come back from hunting they say, "I found a little."

152 156 828 576 754 152 157 828

Examples are not lacking of people who avoid building a fine house or buying an outboard motor in order not to give cause for jealousy. This preoccupation has profound repercussions on the material life and the economy of the Refugee Blacks; it explains in particular the absence of specialized professions and trade among them.

152 156 828 [182] [463]

Many aspects of the customary law of the Refugee Blacks have no other function than to exorcise, if one may say so, tendencies toward jealousy and selfishness which, if they were given free rein, would poison the life of the collectivity.

[183] [571]

The rites of death and mourning, which we have shown to constitute the pivot of the social life of the Refugee Blacks, are entirely based on the idea of preserving the surviving spouse from the effect of the jealousy of the deceased.

76 181 725 828

/243 cont./

754 [683] only commonplace illnesses or accidents of some sort. We have never heard poisoning, in the usual sense of the term, mentioned.

754 695 182 The wisimã trials are in our opinion the most unpleasant aspect of the civilization of the Refugee Blacks. But it must be admitted that they correspond to profound necessities. These archaic societies need an obvious materialization of the principles they have given themselves. Since evil exists, opposing itself to good, the practices of wisi and wisimã exist, and the punishment of evildoers is indispensable for the society to remain subject to the law of good.

[184] By its notion of the kunu which turns aside toward the gods the responsibility for most misfortunes, by the extreme rarity of wisimã trials, by the prudence of its judiciary action which in point of fact pursues only the dead, the society of the Refugee Blacks shows itself humane and realistic.

If one undertook with the Refugee Blacks definite action to make these practices disappear, one would risk obscuring their notion of good and evil and removing all efficacy from their customary law.

[183] The social order of the Refugee Blacks cannot be maintained if the interdiction of harming anyone and the interdiction of vengeance do not remain clearly laid down. It matters little that these acts of sorcery are without real content: It is the intention to harm which counts, with all its social and psychological consequences.

171 177 182 754 When one observes the Creole populations of the Guianas and the West Indies, even though /244/ they have been under the influence of Christianity for several centuries, one is struck by the development of sorcery and by its repercussions on the whole of social life. The teaching received at school and from the catechism, which embraces white magic and black magic in a single reprobation, has greatly contributed toward making these populations lose the principles of social morals of their ancestors without in exchange modifying their

/244 cont./

image of the world. Since magic practices are rejected by religion, since it even denies their reality, one does not think, when one finds oneself constrained to have recourse to them, of transferring to them the notion of good and evil which it teaches. Black magic gets in almost inevitably because a person believes he must defend himself; then its use becomes habitual, and the two forms of magic end up by mixing together and being no longer regarded as fundamentally different from each other.

Cases of wisi and Boni customary law. In African villages, cases of sorcery are interpreted by interminable and useless discussions, wild accusations, protestations of innocence, sometimes more or less sincere confessions, oaths and legal tests with always contested results. These cases are never finished; they are in permanent evolution, sometimes for months and years. Opinion moves successively onto different hypotheses according to events which take place, seeking its way gropingly like a man lost in darkness.

It is clear that the first lawgivers of the Refugee Blacks, by carrying judgment back to the death of those concerned and by refusing the wisimã any kind of pardon or compromise, tried to prevent the development of these sad crises. What is the use of discussing interminably, since there is no certain proof, and since nobody may confess? But customary law collides on this point with tendencies too deep to be entirely restrained. The laws of Odun are not always obeyed to the letter, and it happens sometimes that the Boni lose their footing in the observance of their customary law. Then crises take place among them, as violent and confused as in the villages of Black Africa, going as far as paralyzing social life for several weeks; then peace returns for several months, sometimes for several years.

/256 cont./

845 961 678 613 When twins die young people almost always blame a disagreement which has arisen in the lineage. The twins did not want to live in a disunited family. The head of the lineage then exhorts his people to be reconciled with one another at any cost in order to avoid new misfortunes.(1).

[753] 1. In general they have the idea that dissensions occurring in the lineage have as a consequence illnesses or misfortunes striking the members of the lineage.

• [182] This notion plays a major role in the social life of the Refugee Blacks; after the kunu, it [illegible] principle cement holding [illegible] together.

845 798 One who harms a twin is sure to fall ill. Conversely, it is assumed that the twin must not abuse his power, that he must lead an upright life and avoid quarrels. He is nearer to God than other men.

They assume for example that Efa, of Papalston village, herself a twin and the mother of twins, has a very special power. Nobody would risk harming her.

[613] [774] In lineages having many twins there exists a place of worship sacred to a vital principle called Twilenge. The nature of this principle is not clear. The Boni define it as the soul of twins. Is it a matter of the first twins Adam and Eve? Or of a collective worship offered up to all deceased twins?

CHAPTER IX

SPECIAL CHARACTERISTICS OF THE ECONOMY OF THE REFUGEE BLACKS.

RELATIONS WITH OTHER POPULATIONS

Influence of the Social Institutions and Psychological Tendencies of the Refugee Blacks on Their Material Life and Their Economy

157
182 Certain psychological tendencies of the Refugee Blacks, in part bound up with their moral and religious conceptions and with the historical conditions under which these societies were formed, directly influence their material life in its various aspects: implantation on the ground, agriculture, paid work, trade.

The principal one of these tendencies is individualism, concern for complete material independence.

157
24
31 Influence on agriculture. We have seen that the clearings of the various households issuing from the same kin group were very rarely grouped together. On the contrary, the Refugee Blacks like to disperse their cultivated lands; even in the recently occupied zones where land is not lacking, it happens that one finds isolated clearings in the middle of primary forest more than a kilometer from the riverbank, at the mercy of predatory animals. Ecological conditions, in particular the concern with protection against the manioc-ant, do not explain this dispersion. The Boni recognize that it would be preferable, for fighting the manioc-ant, to group each year all the plantations of one lineage

/291 cont./

157 Wishing to take advantage of all the possibilities which
464 turn up, the Refugee Blacks are led to learn simultaneously the
463 traditional techniques of their group, boating, boat-building, felling of trees, squaring of wood, and /building/ framework. In these techniques they may be considered specialized workers.

157 Proud of their strength and knowledge, sure of themselves,
812 the Refugee Blacks are never worried about the future and consider life as an exciting adventure, ceaselessly bringing new things. If the past year has been bad, the new year will be better, with God's help. Nobody doubts that he will find gainful work again.

152 Influence of jealousy: absence of specialized professions and
182 trade. Another strong psychological tendency having a direct influence on the economy is jealousy.

152 The effect of jealousy, and the fear of jealousy, is to
828 limit enrichment and to maintain a de facto equality: it often
556 happens that talented people forego undertaking profitable work
753 in order not to give occasion for the jealousy which would render
799 their position in the village difficult and might draw misfortunes upon them; for people have the idea that jealousy draws down illnesses and calamities upon him who is the object of it and on his near relatives, by the action of a natural force, even without sorcery being formulated.

754 Fear of sorcery interferes in the same way; one who be-
556 comes unusually rich is almost inevitably accused of being a
441 sorcerer and may be obliged to leave the country. Particularly
829 vulnerable are those, very rare, who engage in trade. People do not suspect of sorcery a man who is seen to become rich by /292/ working ceaselessly. But the trader whose wealth increases without his furnishing obvious work, is quickly regarded as a "committed one," accused of having his good luck as a result of a pact with the devil.

754
556

/292 cont./

In that can doubtless be seen the most likely explanation of the absence, in the tribes of Refugee Blacks, of any internal trade. There are not even markets in the villages. In practice only Creole and Asian traders are patronized.

The repugnance which the Refugee Blacks have for trading with one another contributes toward preventing the development of specialized professions among them. Specialization does actually exist: one man is particularly good at building boats, another is a competent carpenter, still another devotes himself mainly to fishing; but the Refugee Blacks exercise these specialties with respect to other peoples and not with respect to one another. Nobody fails to build his own boat, his house, to cut his clearings himself. If it were otherwise, classes and castes would rapidly be created, and that is precisely what the moral law of the Refugee Blacks condemns. A special effect of this conception is to preserve family custom from deteriorating, by preventing the rich from becoming great polygamists maintaining idle mistresses. We have never heard it said that a richer man paid someone to perform for him the customary work he owes to his wives, clearings, house, boat. Whatever his wealth may be, he continues to do these jobs by the sweat of his brow, and that contributes toward maintaining in its meaning and value the tacit contract concluded between husband and wife.

Thus the geographic conditions, associated with influences of a social and psychological order, impose on the Refugee Blacks a unique economy, based on a symbiosis with the coast populations in the form of piece-work or temporary wage-earning.
